

Automated Ceiling Registers, LLC

ACR's comprehensive array of products begins with a low-cost, direct replacement for standard louvered metal registers. Our state-of-the-art ceiling registers are made of high quality ABS plastic, molded into a pleasing aerodynamic shape that solves leakage and noise problems, and eliminates chilling drafts associated with traditional metal versions. In addition to our manual register, ACR offers an automated solution that allows homeowners to automatically control the amount of airflow on a room-by-room basis. Rooms are heated or cooled faster, eliminating wasted energy. In fact, the savings generated by the ACR product will typically pay for the initial investment in eighteen months or less, depending on the climate and the cost of energy.
